

TrīO™ TRIPLE OFFSET VALVES

Wafer, Lug, Double Flanged
and Butt Weld Ends

delvalflow.com

1-833-DELVAL1

STANDARD FEATURES

Quality & Performance

DelVal Flow Controls provides a wide range of quality products with the reliability you can count on. All TriO™ Triple Offset Valves are manufactured in ISO 9001 certified facilities with a robust quality management system and according to ASME B16.34 and API 609 standards.

Design Construction and Features

1. ISO Top Flange

The top flange is drilled as per ISO 5211 to accommodate direct mounting of a wide range of actuators.

2. Stem

Robust single piece stem, secured in stem bearings at drive and non-drive end of the body, supports the disc against the pressure exerted by the fluid and minimizes disc and stem deflection. Stem is positively retained with groove design and stem retainer to prevent accidental blow out.

3. Stem Seal

Stem seal assembly is live loaded with Belleville Springs. This ensures continuous compression of packing and sealing. Rocker shaped gland bridge compensates for uneven adjustment of gland bolts. Adjustable stem packing with multiple graphite rings seal on high surface finish of the stem and ensures tight sealing, suitable for fugitive emission control.

4. Bearing

Heavy duty bearings are designed to withstand high radial and axial stem loads due to pressure and wear.

5. Disc

Disc is designed with a profile to minimize resistance to flow and pressure drop across the valve and maximize flow capacity.

6. Seal Ring

Elliptical laminated seal ring is located on the disc. It is precision machined for bi-directional, zero leakage sealing. Alternating layers of metal and graphite flex generate a circumferential compressive force on the precision machined hard face seat on the body. Metal laminations in duplex stainless steel provide a rigid back up for the soft graphite laminations. This combination makes the seal suitable for zero leakage sealing at high and low temperatures alike. Seal ring is replaceable.

7. Retainer Ring

Seal ring is clamped rigidly on the disc face by the retainer ring. The retainer is made of identical metal as the disc and combines the disc, seal ring and retainer into a robust, composite unit for zero leakage, bi-directional sealing.

8. Seat

Seat is integral on body and is hard faced with Stellite® gr.21 or suitable alloy. Seat is precision machined to ensure perfect match with the seal ring. This (a) provides bubble tight seal, (b) excellent durability during seating and unseating, and (c) resistance to erosion during high velocity fluid flow.

9. Body

Body is of single-piece cast construction, with options of wafer, lug, double flanged short or long pattern, or butt weld ends. Face to face dimensions and pressure ratings are conforming to international standards.

10. External Position Indicator for Disc Position

Disc position is indicated by a dimple on the shaft. When the dimple is in-line with flow axis, the disc is open.

BLOW-OUT PROOF SHAFT

Valves are equipped with a shaft retainer at the top of the shaft to prevent movement of top portion of the shaft past the gland in case the shaft should break within the valve.

LAMINATED SEAL

BEARING PROTECTOR

Flexible graphite bearing protectors provide the highest level of protection to the bearings while extending service life.

PRINCIPLE OF OPERATION

DelVal® TriO™ Triple Offset Valves provide bi-directional zero leakage. This geometry ensures that the disc seal contacts the body seat only at the final shut-off position without rubbing or galling, providing a torque generated resilient seat with sufficient “wedging” to ensure a uniform seal contact.

Offset 1 : The shaft is located with an offset behind the sealing plane allowing complete sealing contact around the entire seat periphery.

Offset 2 : The shaft axis is offset with respect to the pipe and disc centerline providing interference free opening and closing of the valve.

Offset 3 : The seat cone axis is offset from the disc centerline to eliminate friction during opening and closing and to achieve uniform compressive sealing around the entire seat.

Valve Configuration and Options

Cryogenic

Extended stem and bonnets can be offered for low temperature and cryogenic applications. The design for extended stem and bonnet conforms to BS 6364.

High Temperature

Valves are available with stem extensions and fins for high temperature applications.

Steam Jackets

Steam jacketed valves are available for applications where the media tends to crystallize when cooled down.

Standards and Specifications

DelVal® TriO™ Triple Offset Valves are designed and manufactured to meet the requirements of the following industry standards:

Design: API 609, ASME B16.34, BS EN 593, MSS SP-68

Face to Face: API 609, ISO 5752, BS EN 558, MSS SP-68

Testing: API 598, ISO 5208, EN 12266, MSS SP-68

Pressure Temperature: ASME B16.34

Flange Accommodation: ASME B16.5, ASME B16.47, BS EN 1092-1, AWWA C207

Butt Weld Ends: ASME B16.25

NACE: MR 0175 / ISO 15156

Fire Safe Certified: API 607

Fugitive Emission (Optional): ISO 15848, API 641

CE Compliance: 2014/68/EU (PED)

Body Style: Wafer, Lug, Double Flanged (short / long pattern), and Butt Weld End

Rating: Class 150 to class 900

Temp Range: -20°F to 800°F (Standard)
-320°F to 1290°F (Optional)

Size Range: 3" to 102"

Note:

- Face to face dimensions - Short pattern up to 48" & Long pattern up to 36": As per API 609 Cat. B.
- Face to face dimensions - Short pattern above 48" & Long pattern above 36": As per manufacturer standard.
- Flange dimensions up to 24": As per ASME B16.5.
- Flange dimensions 26" to 60": As per ASME B16.47 series A.
- Flange dimensions 64" to 84": As per AWWA C 207 Class E.
- Please consult DelVal for other dimensions.

Notes:-

*Flow from stem side is the preferred flow direction. Flow from retainer side is non-preferred flow direction. Arrow on valve body indicates the preferred flow direction.

1. BTO - Break to Open; RTO - Run to Open; ETO - End to Open; BTC - Break to Close; RTC - Run to Close; ETC - End to Close. (Pref.) = Preferred , (N. Pref.) = Non Preferred.

2. RTO, ETO, BTC, RTC= 0.4 x Max (BTO, ETC)

3. For actuator sizing, the minimum valve differential pressure shall be 3.5 bar. For differential pressures above 3.5 bar the intermediated values to be interpolated. For gear operator sizing, the full rated torque to be considered.

4. The published torque values are common for both laminar seal & metal seal without any factor of safety. For operator sizing, factor of 30% to be considered.

5. For valves with extension (cryogenic service / high temperature service), 1.5 times of preferred side BTO torque to be considered as a base torque without factor of safety and valves shall be offered as uni-directional. For operator sizing, factor of 30% to be considered.

6. The published torque values are without factor of safety.

7. The following factor of safety shall be considered for operator sizing:

clean service (liquid, steam, clean gas and non-abrasive) = 1.3, high solids slurry = 1.5, Dry gas= 1.7

Notes:-

- *Flow from stem side is the preferred flow direction. Flow from retainer side is non-preferred flow direction. Arrow on valve body indicates the preferred flow direction.
- 1. BTO - Break to Open; RTO - Run to Open; ETO - End to Open; BTC - Break to Close; RTC - Run to Close; ETC - End to Close. (Pref.) = Preferred , (N. Pref.) = Non Preferred.
- 2. RTO, ETO, BTC, RTC= 0.4 x Max (BTO, ETC)
- 3. For actuator sizing, the minimum valve differential pressure shall be 10 bar. For differential pressures above 10 bar the intermediated values to be interpolated. For gear operator sizing, the full rated torque to be considered.
- 4. The published torque values are common for both laminar seal & metal seal without any factor of safety. For operator sizing, factor of 30% to be considered.
- 5. For valves with extension (cryogenic service / high temperature service), 1.5 times of preferred side BTO torque to be considered as a base torque without factor of safety and valves shall be offered as uni-directional. For operator sizing, factor of 30% to be considered.
- 6. The published torque values are without factor of safety.
- 7. The following factor of safety shall be considered for operator sizing:
clean service (liquid, steam, clean gas and non-abrasive) = 1.3, high solids slurry = 1.5, Dry gas= 1.7

Operator Information

All valves can be direct mounted with gear operators for manual operation. Gear operators can also be attached with chainwheel operators for opening or closing valves located on pipelines at high elevations.

All valves can be direct mounted with pneumatic actuators or electric actuators and accessories for complete automation options such as fail open/close and positioner controlled. Valves can be mounted with manual overrides.

HOW TO ORDER

Material

Series **Size** **Body** **Disc** **Stem** **Seal** **Pressure Rating** **Operator** **Special Requirement**

Example: Part Number for a Series 4B, Lug Style DelVal Triple Offset Valve, 4", CF8M Body w/ Stellite 21 body seat overlay, CF8M Disc, 17-4 Stem, S31803 + Graphite Seal, Class 150 Rated with a Gear Operator with Padlock and No Special Requirement would be

4 B 0 4 0 4 4 6 D 5 G 0
